Optimise cost to optimise your performance

Juggling was never one of your key strengths so why try juggling all your cost variables? The Guinness World Records verified that the most balls juggled is 11 and while this is impressive, how long can you keep it going? You need a solution that can offer you continuous cost savings long after the show is over.

Liquid Intelligent Technologies offers an advanced assessment that efficiently identifies all your resources which you are incurring at a cost without seeing the true value of the investment – available for AWS, Azure and Google Cloud Platform.

Reduce cloud bills and increase ROI.

Cloud Cost Optimisation Assessment in 3 steps

1. **Optimise resources**
   Identify idle, unused, mis-provisioned and previous generation resources. We also explain how the use of savings tools help you save money by upgrading to a newer generation resource.

2. **Setup cost alerts**
   Configure budget alerts based on both your budget thresholds and relative cost spikes. Alerts can be triggered by multiple thresholds and can be filtered by subscription, resource group, service, region and tag.

3. **Simplified billing**
   Experience the simplified billing process from ingestion of reports to filtering and sharing Customised reports which can be scheduled for a specific date with the click of a button.

Benefits and features

**Cloud spend optimisation**
Leverage predictive analytics and purchasing recommendations to guide you in every decision that you make.

**Right sizing reports**
Optimise your operations with actionable insights which pinpoint wasted resources and provide re-sizing recommendations.

**Utilise heatmaps**
Make use of heatmaps to visually show peaks and valleys in computing demand. This valuable data is useful in determining start and stop times to reduce costs.

**Cost best practices**
Rest assured with our 600+ best practices which continuously monitor your environment to ensure you are running optimally 24/7.
